

OPENROAD Freight Billing System

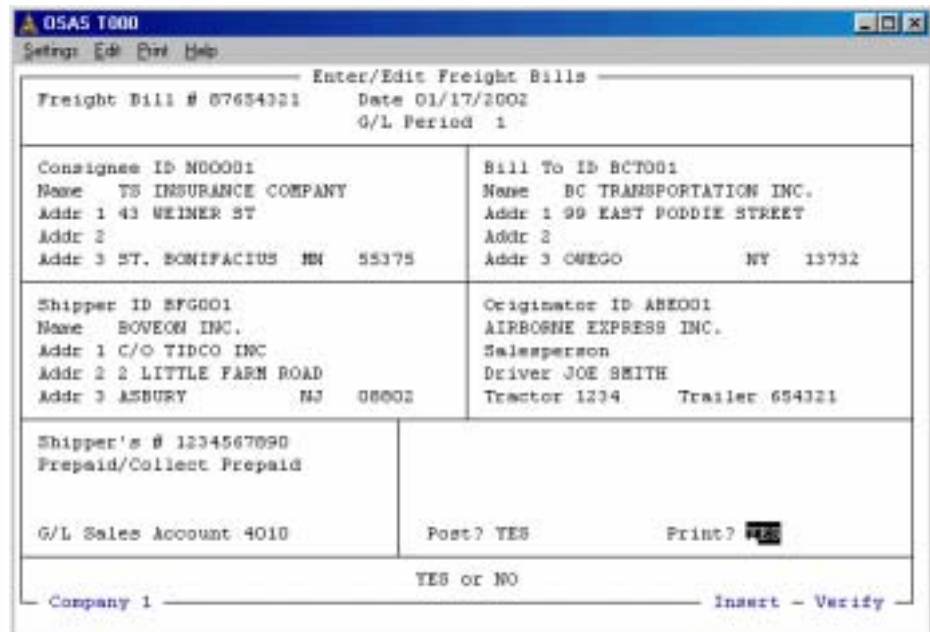

Will Take You There!!

With freight billing and operations management, accurate interline accounting and sound integration with a strong financial system

OPENROAD is a complete pro bill entry and freight management system that updates your accounting applications without re-entering freight bill information. It is designed for freight transportation companies that need to automate the flow of operations and accounting. **OPENROAD** is tightly integrated with OPEN SYSTEMS Accounting Software (OSAS) Accounts Receivable and Accounts Payable modules, to accurately record billing and interline transactions.

With **OPENROAD** you can save time and money, and stay informed. Detailed information lets you know the status of each freight transaction. Up to date reports show you every shipment and delivery, alert you to excessive costs, and track your service. Interline revenue is split so you know your local revenue on each transaction.

As a basic billing system or a full operations management and financial system, **OPENROAD** can grow with your business as it helps your business grow. Versions for truckload and less than load freight management are available. Other applications include dispatch, rating, manifesting, maintenance, delivery, tracing, claims, EDI, internet services, email, payroll, and road/fuel taxes.

Enter/Edit Freight Bills

The basic freight bill entry screens captures important shipping and accounting detail, which is retained in history, and automatically updates the accounts receivable and payable systems. Upgrade to the complete freight management system as your business grows.

OPENROAD Freight Billing System Offers Choices and Flexibility With These Key Features

- ☞ Simple entry screens, following OSAS standards, streamline the collection of shipping and billing information.
- ☞ Includes source code to OPEN SYSTEMS' standards. You'll have fast, easy access to information on key fields, codes, and IDs from predefined inquiry windows. The windows and reports can be customized to provide just the information you want.
- ☞ Define access codes for each workstation, providing password protection. You can protect individual applications, menus, and functions. The system security file is encrypted. with a special menu that you can modify.
- ☞ After each bill is entered , it can be printed (on line) or all bills can be printed together later (batch). The current (unposted) bills can be changed as needed, or individually deleted. Even if a bill has been printed on-line it can be reprinted in batch.
- ☞ Manifests can be created and printed from the current bills in the system. Ranges of pro bill numbers, dates terminals, trailers and lanes can be selected to allow specific analysis. Manifests are printed with and/or without revenues appearing. A revenue per mile analysis is optionally printed on each manifest. A revenue analysis is printed for the current run of freight bills and serves as a summary listing of the day's activity.
- ☞ At the end of each day, the bills are posted. This operation:
 - ☞ Creates an Accounts Receivable transaction that will later be included in the sales journal, the open invoice file, the customer's sales record file and sales analysis. When the bill is split with another carrier, a separate transaction is created, showing the receivable from the interline.
 - ☞ Similarly creates an Accounts Payable transaction when an interline carrier will be paid by you.
 - ☞ Updates the terminal, trailer and tariff files with the revenues, weight and pro bill number count in the day's activity.
 - ☞ Places the freight bill data into a "history" file where it can be accessed for reports and on-screen look-up for as long as you wish to keep it on file. These records can later be deleted from the history file by selecting a range of pro numbers or dates to be removed. You also have the option to NOT remove a pro if it remains unpaid.

OPENROAD Reports Include

Manifests
 Freight Bill Journal
 Batch Statements
 Performance Analysis
 Freight Bills Audit
 Holidays
